Origin and Breeding History

Tsurai Mai originated in California from a hand polinated cross between Kokuho Rose and (Smooth #4 x Calady 40) x Calrose.

Fifteen lines were selected from the F5 generation on the basis of being about fifteen inches shorter than the one parent Kokuho Rose. After checking for kernal appearance and milling quality, two pure lines were mixed for the final variety.

The final selections more resemble its parent Kokuho Rose except for height. It matures about ten days earlier than Kokuho Rose. Tsurai Mai is an excellent quality table rice. It is medium grain and the kernal is almost free from white belly.

The variety has good cooking quality and the best flavor of any of the present varieties in California.

AWNS WILL VARY FROM TIP TO VERY SHORT (1/4 inch).

OTHER THAN THAT, NO VARIANTS ARE EXPECTED. letter 3/24/75

Botanical Description

Tsurai Mai is a strong medium grain variety, and unlike California varieties, does not resemble the Japanese varieties. The plant type is somewhat between the Southern medium grain types and the California Japanese types.

The seedlings are strong and vigorous, responding well to water seeding.

The culm is heavy, stiff, medium length upright, and is pubescent as well as the leaves and grain.

The second foliar leaf is long with small angle.

The flag leaf is upright until heading after which it breaks at almost 90 degree angle. It is also very broad and long.

The plant tillers well. The seeds are strong medium grain and awns vary from slight to tip.

The panical is lax and very long and tips immediately after heading. The lemma and palea are straw colored.
